*We have created this tool to take care of  
the necessities of the companies,  
of the people and thinking in the future.  
We hoped that it is of its affability and convenience.*

## Executive summary

The possibility of incorporating idungu to its organization is a factor important of technological innovation and to want to make the things affluent, ordered, professional, centralized, under international standards consolidated at corporative level and with a designer and publisher in Internet (full Web) that is agreed to which they require the great organizations, to accede from any place but of safe form.

Idungu is a BPA tool (Business Process Analysis) integrated with a model of Enterprise Architecture (EA) that is being developed altogether with the **BPM Center** of the University Federico Santa Maria.

The present model of AE of idungu allows:

- The present model of AE of idungu allows.
- To align the strategy and the objectives with the processes, products and services.
- To model the Vista of the organization structure (position, rolls, people).
- To document to the products and services.
- To model the processes of the organization with the following models:
  - Macro process (VAC = Value Added Chain.).
  - Level of business (Annotation EPC).
  - Level of implementation specification (Annotation BPMN to see 1.1).
- To model to the Vista of functions and data.
- Model for determination of logical systems.
- To define and to prioritize portfolio of projects.
- Matrix Editor (to relate and to align elements of different views).

Present technical properties of idungu:

- To administer to everything from an only console Web.
- Export and import Models from XPD (BPMN) .
- To Version and Recovery models.
- .Users and groups.
- Profiles (Administrator, Analyst and Publisher).
- Converter: EPC to BPMN (beta version).
- Export to Images in different formats (png, jpg, gif etc.).
- Export to MS Word and MS Power Point with corporative image templates.
- To export models of BPMN to BPEL and XPD 2.1.
- Documentation in Wiki concept (Collaboration).
- To define Roles and Organizations of Business that are integrated with Wiki.
- To define attributes and to customizer them according to the necessities of the company.
- Metamodel Management.
- Impact Analysis.
- Enterprise Architecture Views.

- ✓ Attention through an administrator of idungu designated by the Client.
- ✓ SLA: Category of the Support:
- ✓ Critic: 12 hours
- ✓ Means: 24 hours
- ✓ Under: 48 hours

## Security: Users and Profiles

The security is a point of differentiation with another type of tools. Idungu it allows the creation of users with different profiles.

1. Administrator: It has total access to all the functionalities of the tool, allows to create projects, users. In addition it allows to assign to him to create attributes (customization) that can be including later to each one of the objects of the diagrams,

2. Analyst: It allows to create diagrams on a project, to document it and to versioned it.

3. Publisher: It allows to read the diagrams that have been shared him by another user, does not allow modifications. In addition it has access of reading to the implemented attributes and the documentation in Wiki format
